DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 7, 10, 44, 50 are rejected under 35 U.S.C. 102(b or e) as being anticipated by Hsu et al USPN 6,016,442 or Conley et al USPN 617198. Each reference teaches a communicator that communicates with an implantable device that detects and records arrhythmia information. The communicator can send a signal to the device which will respond to upload the various arrhythmia events which would serve as an event status indicator.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 3762

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-6,8-9, 48-49, 51-57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hsu et al USPN 6,016,442 or Conley USPN 6,718,198. Applicant differs merely in reciting the activator switch (magnetic reed) the transmission frequency (audible), which are considered conventional in the art. To have employed these techniques of communication in the Hsu and Conley devices would have been obvious.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark W Bockelman whose telephone number is (703)-308-2112. The examiner can normally be reached on Monday - Thursday 10-8:30.
